Application Frameworks – Group Assignment Installation Guide

1. Open the command prompt and navigate to the project folder.
2. Run “npm install” to install the required modules for the backend.
3. After the installation is done, run “nodemon app” to start up the backend and connect to the MongoDB. (Edit .env file to configure database settings).
4. Navigate to the “client” folder using the command prompt and run “npm install” to install the required modules for the frontend.
5. After the installation is complete, run “npm start” to run the application.
